

Bundle: All training tools and the Reference book: Principles of Crimping Technology - Compendium in one package

Reference: Bundle-SF-FB-EN

File format: App (exe)

Language: English 

Important note: The training system includes several downloads (approx. 250 MB) and some online tools, which are available via our technical library <https://crimppedia.com>.

Your scope of delivery:

- **Reference book: Principles of Crimping Technology - Compendium (SP-01-EN)**
- **Training tools:**

This training module is useful for in-house training and further education of machine setters and production personnel. It can be used as a basis for training as well as a reference source.

- Tool-01-EN-IN - Introduction to cable processing & crimping technology
- Tool-02-EN-WI - Cables & Wires
- Tool-03-EN-OCB - Crimping - Open Barrel Crimp Connectors - Basics
- Tool-04-EN-GCB - Closed Crimp Barrel Connectors - Basics (Ferrules, turned contacts, pre-insulated contacts)
- Tool-05-EN-HCT - Hand tools in cable assembly
- Tool-06-EN-QS - Crimp quality monitoring - methods & application
- Tool-07-EN-VT - Industrial processing techniques in Crimping (Crimping machine, Stripper-crimper, Applicator)

- **Templates for work instructions, test instructions and calibration protocols**
- **Images and graphics**
For creating your own templates and instructions
- **Posters and visual display boards**
 - Interactive posters
 - Templates for printouts

Access to online tools:

- **Requirements and specifications for the wire stripping result**
Error descriptions, causes of errors and their effects
- **The open crimp barrel**
Requirements and specifications for the open crimp barrel. In relation to the equipment used: error descriptions, causes of errors and their effects
- **Tool technology**
Setting the quality specifications in crimping tools for the open crimp barrel
 - Endfeed crimping tool
 - Sidefeed crimping tool
 - Visual inspection of crimping tools & wear parts

This training module is useful for in-house training and further education of machine setters and production personnel. It can be used as a basis for training as well as a reference source.

Important note on the training tools: The training tools are created in Macromedia Flash and published as a stand-alone application (exe). After thorough testing for functionality and security, these applications are made available for download in a packed file (zip). When the training tools are started for the first time, these applications will be checked by your firewall, as with all software. This is a normal process and serves to ensure the security of your systems. Usually the application starts automatically after this check.

If your company firewall does not allow the application to start, please contact your internal system administrator. If you have any questions, please send an e-mail to orga@crimppedia.com. We will also be glad to return your call!

What's the difference to the PDF e-book then?

Due to the interactive structure of the training module, you can browse through the individual application files like in a book, but in the format of your computer screen. A table of contents makes it possible to select specific topics or to scroll back and forth within the topics. Animations show schematic diagrams of processes such as stripping wires, etc.

This documentation system is not a video, though. The system was created using Macromedia Flash and is provided as a interactive application.
