Content

1. Preface	25
1.1 Important Notes on this Documentation	26
1.2 Partners and Sources.....	27
2. Introduction: Technologies of Wire Processing Technologies	28
2.1 A Fact.....	28
2.2 Crimping – A Joining Method.....	29
2.3 Standards, Factory Standards and Specifications for Crimp Connections	29
2.4 Processing of Stranded Copper Conductors	31
2.5 Development of Crimp Connections	32
2.6 Contact Resistance – The Underestimated Quality Criterion	33
2.7 Correct Assignment between Crimp Contact and Nominal Cross Section	34
2.8 The Objective of Wire Harness Making.....	35
2.9 The Objective of Crimping Technology	36
2.10 Reproducible Quality: Equipment	37
2.11 The Transition Zone – Where Flexible turns into Solid	38
2.12 The Effect of Mechanical Loads	39
2.13 Comparison of the Transition in Different Types of Connections	40
2.13.1 Overview	40
2.13.2 Soldered Connections.....	41
2.13.2.1 Tinned Conductors in Screw Terminals.....	41
2.13.2.2 Soldering and Connector Housings.....	42
2.13.2.3 Direct Soldering with Components	42
2.13.2.4 Soldering after Crimping	43
2.13.2.5 Soldering of the Conductor Crimp Area Before Crimping.....	43
2.13.3 Screw Terminals.....	44
2.13.3.1 Wire Ferrules and Screw Terminals	44
2.13.3.2 Insulated Cable Lug.....	45
2.13.4 Closed Crimp Barrel (4-Indent Crimp)	46
2.13.5 Open Crimp Barrel.....	46
2.14 Relieving the Transition Zone	47
2.15 Crimp Contacts, Cable Lugs and other Pressed Connectors.....	48
2.15.1 Open and Closed Barrel Crimp Contacts.....	48
2.15.2 The Open crimp Barrel.....	48
2.15.3 The Closed Crimp Barrel.....	49
2.16 Overview of Crimp Shapes	50
2.16.1 Open Crimp Sleeves.....	50
2.16.2 Closed Crimp Barrels.....	51
3. The Conductor	53
3.1 Basic Conductor Structure.....	53

3.2	Classification of Conductors	54
3.3	Notes on the Processing of Conductor Materials	54
3.4	Geometric Cross-Section vs. Nominal Cross-Section	55
3.5	The Conductor Insulation	58
3.6	Cables with Reduced Insulation	59
3.7	Copper Calculation.....	60
3.8	American Wire Gauge [AWG] and Metric Wire Standards.....	61
3.9	Cable Storage, Preparation and Feeding.....	62
3.9.1	Storage.....	62
3.9.2	Damage to the Insulation	63
3.9.3	Tension-free (Pre-)Feeding.....	64
3.9.4	Wire Storage Systems	65
3.9.5	Wire Pull Machine with Wire-Sag Control.....	67
3.9.6	The Wire Straightening Line.....	68
3.9.7	Routing or Guiding of Cables	69
3.9.8	Pre-Feeding.....	69
3.9.9	Roll Drive.....	71
3.9.10	Belt Drive.....	71
3.10	Gripping of Wires	72
3.10.1	General	72
3.10.2	Design of the Gripping Surface	72
3.10.3	Gripper Types.....	73
3.10.4	Flat Grippers.....	73
3.10.5	Prism Shaped Grippers.....	73
3.10.6	Form Grippers	74
3.11	Cutting Cables or Wires	75
3.11.1	General	75
3.11.2	Blades With Straight Cutting Edges	76
3.11.3	V-Shaped Blades.....	76
3.11.4	Cable Shears.....	77
3.11.5	A direct comparison: Cable Shears vs. Side Cutter	78
3.12	Wire Stripping	79
3.12.1	Basic Rules of Wire Stripping.....	79
3.12.2	Stripping Tasks.....	82
3.12.3	Partial Removal of the Insulation Jacket.....	83
3.12.4	Types of Stripping Blades	83
3.12.5	Straight Stripping Blades	84
3.12.6	V-Shaped blades for Cutting & Stripping	85
3.12.7	Radius blades for Cutting & Stripping.....	86
3.12.8	Radius Stripping Blades.....	86
3.12.9	Special Blades – Blade Combinations in Fully Automatic Machines.....	87

3.12.10 Rotative Stripping	88
3.12.11 Rotative Step Stripping (Koax)	89
3.12.12 Behavior of the Insulation during the Stripping Process	90
3.12.12.1 Positioning of the Blade Edge in relation to the Pulling Direction	90
3.12.12.2 The Contact Pressure of the Grippers	91
3.12.12.3 The Contact Pressure of the Feed Rollers.....	92
3.12.12.4 About the Quality of the Cutting Edges (Sharpness of the Blades)	95
3.12.13 Cutting & Stripping – Systems.....	96
3.12.13.1 Custom Programmable Stripping on Automatic Machines	96
3.12.13.2 Stripping & Twisting	100
3.12.13.3 The Blade Unit.....	101
3.12.13.4 The Blade Unit (Komax).....	104
3.12.13.5 Sequence of Operations in the Blade Unit.....	104
3.12.14 Error Descriptions during Stripping.....	108
3.12.14.1 Overview	108
3.12.14.2 Single Strands Damaged and / or Cut off	109
3.12.14.3 Single Wire Strand Pulled	110
3.12.14.4 Damaged Surface of the Wire Strands – Stripper-Crimper	111
3.12.14.5 Insulation Improperly Cut	112
3.12.14.6 Insulation Threads on the Cutting Edges.....	113
3.12.14.7 Insulation Damaged.....	114
3.12.14.8 Insulation Residue on the Conductor	115
3.12.14.9 Undone Twisting of the Wire Strands	116
3.12.14.10 Broom-shaped Conductor Ends	116
3.12.14.11 Kinked Wire Strand.....	116
3.12.14.12 Overtwisted Conductor.....	117
3.12.14.13 Variations in Stripping Length.....	118
3.12.14.14 Heavy Oxidation on the Conductor.....	118
3.13 Multi-Core Sheathed Cables.....	119
3.13.1 General	119
3.13.2 The Structure of Multi-Core Sheathed Cables	119
3.13.3 Cutting of Sheathed Cables	120
3.13.4 Blade Types for Sheathed Cables.....	120
3.13.4.1 V-Shaped Blades.....	120
3.13.4.2 Radius Blades	120
3.13.4.3 Special Blades.....	121
3.13.5 Processing of the Inner Conductors	121
3.13.6 Sizing of the Stripping.....	122
3.13.7 Stripping the Outer Sheat (Jacketing) – Schematic Representation	123
3.13.8 Rotative Stripping	124
3.13.9 Error Descriptions.....	125

3.13.9.1	Inaccurately Cut Sheath.....	125
3.13.9.2	Deformed Cable End– Deformed Inner Conductor	125
3.13.9.3	Damaged Inner Conductor.....	125
3.13.9.4	Damage to the Outer Sheath	126
3.13.10	Stripping the Outer Jacket – Tools & Machines	127
3.13.10.1	Jacket Stripping with Hand Tools	127
3.13.10.2	Manual Bench-top Devices	127
3.13.10.3	Semi-Automatic Jacket Stripping	128
3.13.10.4	Automatic Cutting and Jacket Stripping.....	128
3.14	Thermal Stripping.....	129
4.	Crimping: Open Barrel Crimp Connectors	130
4.1	The Basics.....	130
4.1.1	Terms & Definitions	130
4.1.2	Open Crimp Barrels.....	130
4.1.3	Advantages and Disadvantages of Open Crimp Sleeves.....	131
4.1.4	The Wire Crimp of an Open Crimp Sleeve	132
4.1.5	Compression Ratio for Open Crimp Sleeves	133
4.1.6	What does „Gas-Tightness“ mean?.....	134
4.1.7	Cross-Section Filling – The Effects of Missing Wire Strands.....	135
4.1.8	Soldering Crimp Connections.....	136
4.1.9	Processing Open Crimp Sleeves.....	138
4.1.9.1	Embossings in the Wire Crimp Area.....	138
4.1.9.2	Taped Crimp Contacts.....	138
4.1.9.3	Single Contacts	139
4.1.9.4	The Roll Crimp	139
4.1.10	Overview of Crimp Shapes	142
4.1.11	Assignment.....	143
4.1.11.1	Assignment Crimp Contact – Nominal Cross Section – Tooling.....	143
4.1.11.2	Assignment: Conductor Nominal Cross Section – Crimp Contact	144
4.1.11.3	Assignment: Insulation Diameter – Crimp Contact.....	145
4.1.12	Mechanical Play of the Crimped Contact in the Housing.....	146
4.1.12.1	Effects of Lacking Cavity Play.....	147
4.2	Overview of the Crimp Connection Areas	148
4.3	Wire and Wire Positions	149
4.3.1	The Stripping Length	149
4.3.2	Inserting and Positioning the Stripped Wire into the Crimp Contact	150
4.3.2.1	Conductor End / Conductor Protrusion.....	150
4.3.2.2	Position of Conductor and Seal in the Crimp Contact	150
4.3.2.3	Seal Positions.....	151
4.3.2.4	Wire Insertion: Crimp Applicators.....	151
4.3.2.5	Wire Insertion: Crimp Applicators in Fully Automatic Crimp Machines	153

4.3.2.1	Wire Insertion: Hand Crimp Tools	154
4.4	The Wire Crimp Area.....	156
4.4.1	Wire Crimp: Creating a Crimp Connection.....	157
4.4.2	Crimp Dimensions	158
4.4.2.1	Wire Crimp Height	158
4.4.2.2	Tolerances	159
4.4.2.3	Wire Crimp Height and Properties of Crimp Connections	160
4.4.2.4	The Crimp Height – A Compromise.....	160
4.4.2.5	Crimp Dimensions & Micrograph.....	161
4.4.2.6	Wire Crimp Width	162
4.4.3	The Rear Bellmouth.....	163
4.4.3.1	Task & Origin.....	164
4.4.3.2	Wire Crimper & Bellmouth	165
4.4.3.3	Size of the Rear Bellmouth	165
4.4.3.4	Adjusting the Bellmouth: Sidefeed Crimp Applicator	166
4.4.3.5	Adjusting the Bellmouth – Endfeed Crimp Applicator.....	167
4.4.3.6	Bellmouth Formation – Hand Tools.....	168
4.4.3.7	Variations in Bellmouth Size and Execution	169
4.4.3.10	Effects of a Missing Rear Bellmouth.....	170
4.4.3.11	Causes for the Lack of a Bellmouth.....	171
4.4.3.12	Effects of an Excessive Rear Bellmouth.....	171
4.4.4	The Front Bellmouth	173
4.4.5	Burr Height and Width at the Crimp Base.....	174
4.4.6	Number of Captured Wire Strands and the Stripping Result	175
4.4.7	Crimp Flank Design	175
4.4.7.1	Crimp Flank Symmetry	177
4.4.7.2	Position and Location of the Crimp flank Tips.....	177
4.4.7.3	Material Thickness of the Crimp Contacts Base	177
4.4.7.4	Supporting Height.....	177
4.4.7.5	Supporting Angle	177
4.4.7.6	Error Description – Curling of the Crimp Flanks.....	178
4.5	The Insulation Crimp	184
4.5.1	Insulation crimp Shapes and Requirements	184
4.5.1.1	Overview – Insulation Crimp Shapes	184
4.5.1.2	Determining the Insulation Crimp Dimensions.....	185
4.5.1.3	Bending Test	185
4.5.1.4	Wrapping Test.....	186
4.5.1.5	B/F-Shape Insulation Crimp.....	187
4.5.1.6	B/F-Shape Insulation Crimp: Common Errors.....	187
4.5.1.7	B/F -Shape Insulation Crimp: Special Variant.....	188
4.5.1.8	Overlap Crimp (OV).....	188

4.5.1.9	Formation of an Overlap Crimp	188
4.5.1.10	Overlap Crimp: Common Errors.....	189
4.5.1.11	The Asymmetric O-Crimp	190
4.5.1.12	Asymmetric O-Crimp: Common Errors.....	190
4.5.1.13	Asymmetric O-Crimp with Seal	191
4.5.1.14	Asymmetric O-Crimp with Seal: Common Error.....	191
4.5.1.15	Symmetric O-Crimp with Seal	191
4.5.1.16	Symmetric O-Crimp with Seal: Common Errors.....	191
4.5.1.17	Insulation Crimp: Position Deviation and Contact Geometry	192
4.5.1	Positional Deviation (Tilting) of the Insulation Crimp Flanks	193
4.6	Single Wire Seal Assembly – Conductor Sealing	194
4.6.1	The Seal.....	194
4.6.2	Assignment of the Seal to the Crimp Contact	195
4.6.3	Singulation - Feeding of the seal.....	195
4.6.4	Putting Seals on a Wire	197
4.6.5	Automatic Control of the Seal Position	198
4.6.6	Insulation Crimp Shapes for Seal Processing.....	199
4.6.7	Assembly of Sealed Crimp Contacts	199
4.7	Transition or Connection of the Wire Crimp to the Functional Area	200
4.8	The Functional Area.....	201
4.8.1	Positive-Locking Connection.....	201
4.8.2	Spring-Loaded Contact Surfaces	202
4.8.1	The Contact Area	203
4.8.2	The Connector Thickness	204
4.8.3	Mating Force – Tensile Force.....	204
4.8.4	Latching Function – Latches	205
4.8.5	Damage due to Functional Tests.....	206
4.9	Symmetries in the Crimp Connection.....	207
4.9.1	Symmetry: Position Deviation (Bending) WC/IC	207
4.9.2	Position Deviation Contact Area to Crimp Area	209
4.9.3	Distorsion between Crimp Area and Contact Area.....	210
4.10	The Cut-off Tab – Connection to the Carrier Strip	212
4.10.1	Cut-Off Tab Length.....	212
4.10.2	Cut-Off Tab Length in Sealed Contacts.....	212
4.10.3	Setting The Cut-Off Tab length in an Endfeed Applicator.....	212
4.10.4	Cut-Off Tab Length in Sidefeed Applicators.....	213
4.10.5	Error Description: Cut-Off Tab Length	214
4.10.5.1	Sidefeed – Rear Cut-Off Tab Too Long.....	214
4.10.5.2	Endfeed – Rear Cut-off Tab Too Long	215
4.10.5.3	Sidefeed – Rear Cut-off Tab too Short.....	216
4.10.5.4	Endfeed - Rear Cut-off Tab Too Short.....	217

4.10.5.5	Variations in the Length of the Cut-Off Tabs.....	218
4.10.6	Cut-off Tab – The Burr	219
4.11	The „Shark Tooth“ Wire Pin.....	221
4.12	The Multi-Element Clip	222
4.12.1	The Multi-Element Clip – Wear Parts	223
4.13	The Clip – With or Without Insulation Crimp.....	224
5.	Test Method and Application.....	225
5.1	Fundamentals and General Information.....	225
5.1.1	Tests as a Source of Error	227
5.1.2	Which Test Detects Which Errors.....	229
5.1.3	When To Perform Which Test?	230
5.1.4	In-Production Testing Regarding Processing Equipment	231
5.1.5	Special Release – Risk Assessment of A Crimp Connection	232
5.2	Visual Inspection.....	233
5.2.1	The Visual Inspection Protocol.....	233
5.2.2	Visual Inspection – Overview	234
5.2.3	Visual Inspection - Insulation crimp	235
5.3	Measuring Crimp Dimensions.....	236
5.3.1	Wire Crimp Height – Open Crimp Barrel.....	236
5.3.2	Measuring Tools– Open Crimp Barrel	236
5.3.3	Measurement Procedure – Open Crimp Barrel.....	238
5.3.4	Wire Crimp Width – Open Crimp Barrel.....	239
5.4	Pull-out Test.....	240
5.4.1	General	240
5.4.2	Requirements for a Pull-Out Tester	240
5.4.2.1	Pull-Out Tester Types.....	240
5.4.2.2	Receptacle for Crimp Contacts	241
5.4.2.3	Clamping Device for the Wire	242
5.4.3	Test Preparations	243
5.4.4	Pull-Out Test – Procedure.....	243
5.4.5	Visual Evaluation During the Pull-Out Test.....	244
5.4.6	Errors and Interfering Factors During Pull-Out Tests	245
5.4.6.1	Closed Insulation Crimp Flanks / Insulation Crimp.....	245
5.4.6.2	Subsequent Opening of the Insulation Crimp Flanks	245
5.4.6.3	Holding the Test Specimen by Hand	246
5.4.6.4	Crimp Contact Bending in the Receptacle	246
5.4.6.5	Jerky, Fast Pull-Out	247
5.4.7	Application Examples.....	247
5.4.8	Pull-out Force in Relation to the Wire Crimp Height.....	248
5.4.9	Pull-Out Values Open Crimp Barrel.....	249
5.4.10	Pull-Out Values Crimp Connection.....	249

5.5	Micrograph Preparation.....	250
5.5.1	Principles.....	250
5.5.2	Position of the Microsection	252
5.5.3	Separating and Polishing the Crimp Contact	252
5.5.4	Cleaning the Microsection.....	253
5.5.5	Measuring the Crimp Geometry	253
5.5.6	Errors in Micrograph Evaluation	253
5.5.7	Example of a Micrograph Documentation.....	254
5.5.8	The Insides of a Crimp – Open Crimp Barrel.....	256
5.5.9	The Limits of Crimping Technology – Open Crimp Barrel	257
5.5.10	Evaluation Criteria for Micrographs	258
5.5.11	Micrographs of Faulty Samples.....	259
5.6	Crimp Force Monitoring and the Open Crimp Barrel	261
5.6.1	The Philosophy behind it.....	261
5.6.2	Schematic Structure	262
5.6.3	The "Piezo-Effect".....	262
5.6.4	The Force Curve.....	263
5.6.5	Forces in Dependence of the Conductor Cross-Section	263
5.6.6	Interfering Forces.....	264
5.6.6.1	The Crimping Machine.....	264
5.6.6.2	Tool Holder in the Crimping machine	265
5.6.6.3	Tool Base Plate	266
5.6.6.4	The Crimp Applicator.....	267
5.6.6.5	The Crimp Contact	268
5.6.6.6	The Stripped Wire.....	268
5.6.7	The Learning or Calibration Process (Teach-In)	269
5.6.8	Error Detection – Tolerances – Headroom	271
5.6.1	Drift of the Force Curve.....	272
5.6.2	Drift Compensation.....	272
5.6.3	What Does Crimp Force Monitoring Detect – The Real World	273
5.7	Slow-Motion-Test	274
5.7.1	Fundamentals.....	274
5.7.2	The Test.....	275
5.7.3	Required Changes.....	276
5.7.4	Source of Error: Wire Crimper.....	277
5.7.5	Alternative Processing	279
6.	Machine Technology.....	280
6.1	Fundamentals	280
6.2	Machine Types.....	281
6.3	Structure of a Crimping Machine	282
6.3.1	The Bottom Tool Fixture	283

6.3.2	The Machine Stroke.....	284
6.3.3	Crimping Machine Standards – Bottom Dead Center	284
6.3.4	Adjusting the Bottom Dead Center	285
6.3.5	Alternative Setting of the Crimp Height.....	286
6.3.6	Inserting Crimp Tools.....	287
6.3.7	Machine Capability	288
6.4	The Stripper-Crimper (Open Crimp Barrel)	289
6.4.1	Basics and Philosophy	289
6.4.1	Stripper-Crimper: The Functional Units	289
6.4.2	Stripper-Crimper: The Work Cycle	290
6.4.3	Stripper-Crimper: Function Variants	293
6.4.3.1	Variant 1: Stripping Unit in the Working Line	294
6.4.3.2	Variant 2: Stripping Unit Outside the Crimp Tool	295
6.4.3.3	Variant 2 - Errors	297
6.4.4	Stripper-Crimper: Gripper Unit	298
6.4.4.1	Errors in the Gripper Unit	299
6.4.5	The Stripping Unit.....	300
6.4.5.1	Function of the Sensor in the Stripper-Crimper.....	300
6.4.5.2	Stripping Blades: Requirements.....	301
6.4.5.3	Setting the Stripping Unit	302
6.4.5.4	Stripping Blades: Setting OK.....	304
6.4.5.5	Error – Surface of the Wire Strands is Scratched	305
6.4.5.6	Stroke Limitation – A Stop for the Wire.....	306
6.4.5.7	Setting Error – Too Much Removal Force for Insulation Residue.....	309
6.4.6	Inserting the Wire.....	310
6.4.6.1	Correct Insertion of the Wire	310
6.4.6.2	Error – Wire Bent During Insertion	311
6.4.6.3	Error – Wire Inserted at a Wrong Angle.....	312
6.4.7	The Crimp Tool (Applicator)	313
6.4.8	Error: Wire is „Hollow“	314
6.4.9	The Zero-Cut.....	315
6.4.9.1	Zero-Cut: Semi or Fully Automatic	315
6.4.9.2	Zero-Cut: Manual.....	317
7.	Crimping Tool Technology (Applicator) – Open Crimp Barrel.....	318
7.1	Overview.....	318
7.1.1	Tool Types.....	318
7.1.2	Crimp Applicator: Definitions.....	319
7.1.3	Achivable, Reproducible Quality	320
7.1.4	Effects of Tool Settings - Example: Contact Position	321
7.2	Basic Structure of Crimp Applicators	324
7.2.1	References in the Sidefeed Crimp Applicator	325

7.2.2	References in the Endfeed Crimp Applicator	327
7.3	Crimper, Anvil, Shear Unit	327
7.3.1	Assignment of the Wear Parts.....	327
7.3.1	Wire Crimper and Insulation Crimper	328
7.3.1.1	The „Lean“ Crimper	329
7.3.2	The Anvil	330
7.3.3	The Shear Units.....	331
7.3.3.1	Shear Unit for Sidefeed Crimp Applicators	331
7.3.3.2	Shear Unit for Endfeed Crimp Applicators	332
7.4	Setting the Crimp Height	334
7.4.1	Overview of Tool Heads.....	334
7.4.2	Sliding Head	334
7.4.3	Rotating Disk with Several Fixed Crimp Heights.....	335
7.4.4	Rotating Disk with Stepless Adjustment	335
7.4.5	The Ram and its most important Components.....	336
7.4.6	Setting the Crimp Heights – The Principle	337
7.5	The Feed of the Crimp Contact	338
7.5.1	Feed Variants – Feed Curve	338
7.5.2	The Principle of Mechanical Feed	339
7.5.3	Pneumatic Feed	345
7.6	Wire Stop – The Wiper as a Positioning Aid.....	347
7.7	Sensor Triggering as a Positioning Aid	348
7.8	The Wiper	349
7.9	Hold-Down Systems.....	351
7.9.1	Function and Area of Application.....	351
7.9.2	Hold-Down Systems for Sidefeed and Endfeed Applicators	352
7.9.3	Hold-Downs for Sidefeed Applicators	353
7.10	Endfeed Applicator: Settings	354
7.10.1	The Feed – Positioning the Crimp Contact	354
7.10.2	Feed: Setting Rear and Front Bellmouth	355
7.10.3	The Feed: Setting Front and Rear Cutoff Tabs.....	356
7.10.4	The Feed: Incorrect Contact Position	359
7.10.4.1	Crimp Contact is Not Transported Far Enough.....	359
7.10.4.2	Crimp Contact Transported too Far.....	360
7.10.4.3	Position Deviation (Tilting) of the Insulation Crimp Flanks	361
7.10.5	The Feed – Stroke Length	362
7.10.6	The Contact Brake.....	364
7.10.7	Contact Guide in the Endfeed Applicator.....	365
7.10.1	Shear Unit for Separating Crimp Contacts.....	367
