

Reference book: Cables & Wires - Handling - Cutting - Stripping

Reference: PB-08-EN

File format: PDF / A4 – 101 pages

Language: English 

Note: *This publication is an excerpt from the reference book "Principles of Crimping Technology – Compendium"!*

Brief description: The basis for every assembly is the processing of cables and wires with different tools and machines.

This ebook describes the technical possibilities in the processing of cables & wires. Starting with the initial provisioning, the feeding, the cutting to length and the stripping, each work step is described with the different techniques. The focus is always on the quality specifications for the finished processed wire.

An error overview shows the possible causes, effects and possible solutions for optimizing the processing quality and avoiding errors.

This technical publication contains information from the relevant industry standards, as well as from various factory standards as well as the results of practical tests and empirical findings.

Update: This reference book will be updated or extended as required in line with ongoing technical evolution. These updates are free of charge. With the website <https://crimppedia.com> we have created a constantly growing knowledge database. After a free registration we activate additional download areas for you, where you can access, in the context of your order, further documentation, information, picture and graphic material, templates, and much more.

Important: All information in this documentation is either excerpts from designated standards or the result of practical tests and empirical values and does not claim to be complete. All information is without guarantee and does not relieve the user of his own responsibility and duty of care towards his applications! The illustrated machines and production equipment serve to better illustrate the individual topics and are not to be understood as a purchase recommendation! Any questions? Send us an e-mail!
